

# EURO CHARM

EUROpean quality Controlled Harmonization Assuring Reproducible Monitoring and assessment of plastic pollution

**Bert van Bavel** Project Coordinator  
**Amy Lusher** Project Manager  
**Gabrielle Hairabedian** Project Support

**NIVA**  
Norwegian institute for  
water research

This project has received funding from the European Union's Horizon 2020 coordination and support action under grant agreement No. 101000805 (EUROqCHARM).  
This output reflects only the author's view and the European Union cannot be held responsible for any use that may be made of the information contained therein.

# EUROpean quality Controlled Harmonization Assuring Reproducible Monitoring and assessment of plastic pollution

- H2020-SC5-2018-2019-2020
  - Greening the economy in line with the Sustainable Development Goals (SDGs)
- H2020-CESC5-29-2020
  - A common European framework to harmonise procedures for plastics pollution monitoring and assessments.

**Horizon 2020 Call:** H2020-CESC5-29-2020

**Type of call:** Coordination and Support Action (CSA)

**Project number:** 101000805

**Total budget:** 2 045 000 €

**Project hours:** 198.5 PM total

**Societal Challenge 5:**

Climate action, environment, resource efficiency and raw materials

**Partners:** 8 Research Institutes, 2 SMEs, 2 Research Council, 2 University, 1 Standardization Agency

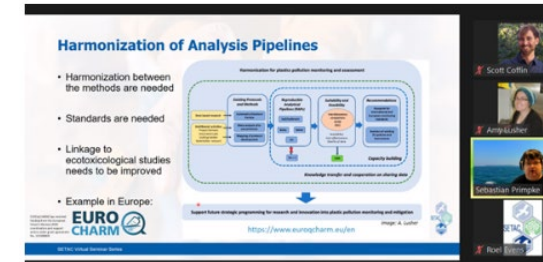

# EUROpean quality Controlled Harmonization Assuring Reproducible Monitoring and assessment of plastic pollution

- Application date: 13 February 2020

- Decision date: June 2020
- Start date: 1 November 2020

- End date: 31 October 2023

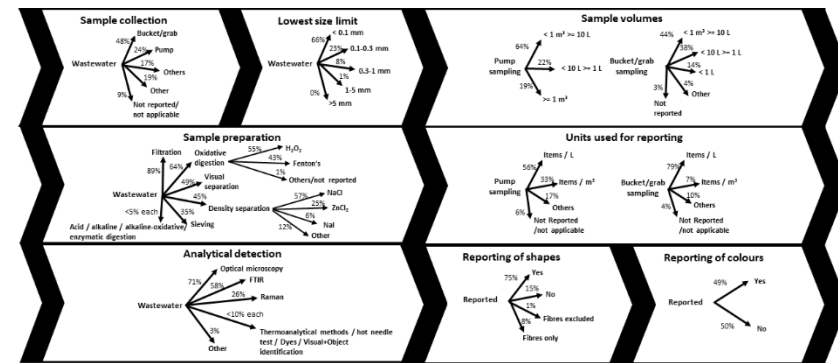

# State of the art

- EUROqCHARM has developed a new concept to access analytical methods.
- By using Reproducible analytical pipelines (RAPs) and SWOT Analysis the Technical Readiness Level (TRL) was established of analytical methods.

Aliani et al., 2023, Nature Reviews earth and environment

	TRL	Survey design	Sample collection	Sample preparation	Analytical detection	Plastic quantification	QA/QC	Data reporting
Basic research	1							
	2							
	3							
Applied research	4			Acid digestion	NIR imaging			
	5		Composite sampling		Thermoanalytical (TED GC-MS, PY-GC-MS) Unaided visual/Object identification		Field blanks Positive controls	International databases
Development	6	Sea water Terrestrial water Wastewater			Fluorometric techniques		Air blanks	
	7			Alkaline digestion Enzymatic digestion	SEM-(EDX) Hot needle/melt point assessment		Air filtration systems	Raw data in publications
Implementation	8		Net sampling Pump sampling Bucket/Grab sampling		Chemical ID with RAMAN (including microscopy)	items/km <sup>2</sup>	Procedure blanks	
	9			Oxidative Digestion, Filtration/sieving, Visual Separation, Density separation	Optical microscopy Chemical ID with FTIR (ATR, general and microscopy)	items/m <sup>3</sup> items/L		

# State of the art

- Key paper on concept
  - Nature Reviews Earth and Environment
- Four reports TRL methods
  - Water
  - Biota
  - Soil/Sediment/Sand
  - Air
- Database > 3000 papers
  - To be published
- Concept recently used for plastic sea floor litter

### Reproducible pipelines and readiness levels in plastic monitoring

Stefano Aliani, Amy Lusher, Francois Galgani, Dorte Herzke, Vladimir Nikiforov, Sebastian Primpke, Lisa Roscher, Vitor Hugo da Silva, Jakob Strand, Giuseppe Suaria, David Vanavermaete, Katrien Verlé, Bavo De Witte & Bert van Bavel

Check for updates

Flexible decision-making tools are needed to support action plans for plastics and other pollutants. Reproducible Analytical Pipelines (RAPs) and technological readiness levels (TRLs) will enable systematic validation and global harmonization of plastic pollution monitoring methods.

separately. For instance, scientists or policy makers can decide if a single step in the RAP (such as the use of analytical instruments to confirm the polymeric identity of particles) is mature enough to be implemented in all monitoring guidelines that share it. If the method is not mature, further testing and validation can be recommended. To support this decision-making, it is important to use a robust and synthetic approach to assess the maturity of each step of a plastic monitoring RAP (that is, how much a technology is ready to fulfil the expected tasks). Although rarely applied to environmental science<sup>2</sup>, we suggest using TRLs – developed by NASA to evaluate if a space technology was ready for deployment or needed further development<sup>3</sup> – for

# Validation

- EUROqCHARM has developed reference materials and used these materials in an international inter laboratory comparison study (ILC)
  - Reference material will be commercially available
  - ILC will be continued through QUASIMEME and the NORMAN network

### Microplastic tablets

As part of our evolving portfolio of plastic reference materials, known as PRef®B, we will produce plastic reference materials in tablet form.

The soda tablets will contain known amounts (number of particles and/or mass) of single virgin and weathered microplastics. These tablets are user-friendly and are designed for the reliable creation of calibration curves to accurately quantify plastics in test samples using both optical and mass spectrometry-based methods.

The tablets will mimic an authentic environmental sample, with a specified amount of microplastic inside, and 10% standard deviation of the specified amount must be acknowledged.

**How to use the microplastic tablets**

The soda tablets are produced for counting microplastic particles in a sample using pyrolysis GC-MS, MicroFTIR, FT-RAMAN or similar techniques. The tablets will support researchers in establishing the polymer types, quantity of particles present, particle size and mass of polymers present.

**What standards does Chiron offer?**

Chiron no.	Mass	Synonym	CAS
12453-N-TAB	Mass tablet for microplastic single and mixed	n/A	n/A
12448-X-50/200-TAB	PE 50-200 micron, tablet	Polyethylene, microplastic 50-200 micron	9002-084
12447-X-50/200-TAB	PET 50-200 micron, tablet	Polyethylene terephthalate, microplastic 50-200 micron	25038-084
12446-X-50/200-TAB	PS 50-200 micron, tablet	Polystyrene, microplastic 50-200 micron	9005-334
12449-X-50/200-TAB	PP 50-200 micron, tablet	Polypropylene, microplastic 50-200 micron	9003-070
12450-X-50/200-TAB	PVC 50-200 micron, tablet	Polyvinylchloride, microplastic 50-200 micron	9002-082
12451-X-50/200-TAB	PC 50-200 micron, tablet	Polycarbonate, microplastic 50-200 micron	25037-454

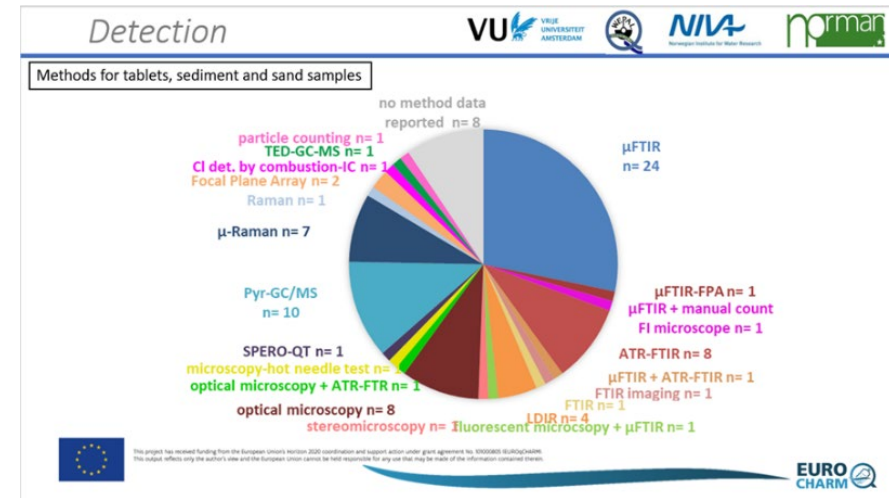

Your Preferred supplier of plastic reference materials  
Chiron microplastic standards will be delivered as one compound per tablet. For more information, please contact us today at [sales@chiron.eu](mailto:sales@chiron.eu), or scan the QR code to keep informed of product availability.

# Validation

- EUROqCHARM has developed reference materials and used these materials in an international inter laboratory comparison study (ILC)
  - Reference material will be commercially available
  - ILC will be continued through QUASIMEME and the NORMAN network

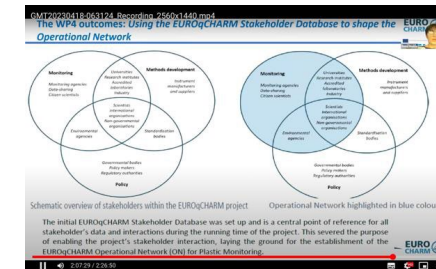

printdate 12-Aug-2022 13:53:03

# Harmonisation

- EUROqCHARM has worked closely with standardisation organisations (ISO/CEN) and monitoring initiatives (within MSFD-TGML, OSPAR, ICES, AMAP) to harmonise methods for plastic litter.
- EUROqCHARM's reference material will be used for ISO-NP-16094 Microplastics in water and related matrices.

ISO/TC 147  
Water quality

# Capacity Building

- EUROqCHARM has put significant effort on capacity building including both online and hands-on workshops.
- EUROqCHARM is working on a handbook with containing information on more than 60 organizations and 30 projects / activities related monitoring efforts of plastic litter.
